The Company

Since our beginnings in 1948 we have transformed steel to create useful shapes for our daily life.

In 1987 a new production center was built for the design, development and manufacturing of home fittings.

Subsequently and due to the needs of standardizing the manufacturing process and improving our customer service, we built a logistic warehouse.

Our continuous innovation, quality service and meeting of our customer's needs, led us to a constant growth and the introduction of our products into different markets both nationally and internationally.

R&D

We rely on a highly qualified staff and our Design and Research Department is equipped with the state-of-the art technology.

During the development of a new product our main focus is the final user.

From the original idea, throughout all the developing stages, up to the final solution we work in cooperation with our customers.

Easy mounting, functionality, careful design and quality of use are our major focus when it comes to developing a new product.

Manufacturing

There are various stages in our manufacturing process, which we carefully control:

- Raw materials

They must meet the predefined requirements in order to reach the desired quality level.

- Transformation process

We control the manufacturing process at every stage.

- Coating

The coating technical requirements defined by our Quality System specify the optical appearance, shock resistance, stainless and adherence features.

- Assembling and packing

The finished product passes to our assembling and packing section, where each part is checked and finally stored and shipped.

Quality

- Total Quality is our main goal.

Thorough control of the manufacturing process, logistics, storing and customer service. Our Quality Management Certificate UNE-EN ISO 9001-2015 proves it.

- We are committed to the environment.

Throughout our manufacturing process all the potentially polluting waste is appropriately treated, and whenever possible recycled for reuse.

Our certificate of Environmental Management System UNE-EN ISO 14001/2015 proves it.

Kitchen equipment

Functionality, order and cleanliness in a kitchen are conditioned by a whole set of fundamental details: the beauty of an intelligent design, the ergonomic keys that determine the functionality criterion and the quality in materials and finishing. Menage Confort presents a new sophisticated and exclusive concept in kitchen equipment, in which we have taken great care to achieve a perfect balance between formal and functional aspects, so that its beauty and utility provide a pleasant use.

Bedroom equipment

Menage Confort presents its line of accessories for interior wardrobe space with adaptable units, manufactured from high quality materials. The use of these systems makes the most of the available space in your wardrobe, enabling a tidy distribution and an easy access to all the clothes kept in it. In this new line we have gone to great lengths in both the physical aspect and the impeccable functionality.

Structura modular system

Structura is a versatile, practical and functional system. Suitable to any environment. We present it in two finishings: silver and bronze. Easily combinable and with different melamine and wood tones. The stability and load capacity has been carefully tested as well as the fast and easy assembly system. All the features described, collectively combined, define the Structura Range.
